

NOISE CLIPPER®
HEARING PROTECTION

NOISE CLIPPER

The Noise Clipper is a set of custom-made earplugs with fixed filters from 25dB to 34dB attenuation. The Noise Clipper attenuates all frequencies in the hearing spectrum and is more active in the high tones. This unique ability enables the user to have communication in a noisy environment while being protected against hearing damage (TTS & PTS).

Most conventional designed "one size fits all" protectors lead to over protection and associated isolation and lack of communication. The tailor made Noise Clipper with its professional service package overcomes these limitations and controls sound to enable communication. Each Noise Clipper can be leak tested in the wearer's ear to ensure that no sound can pass the protector and enter the ear – thus ensuring that the only sound that enters the ear is through the calibrated filtering device embedded in the Noise Clipper.

MAIN FEATURES

- **Leak tested**
- Durable (virtual unlimited life)
- Communication ability
- Colour differentiation
- NRR calibration (prevents over protection)
- Cultivates pride/high ownership
- Comfortable
- Cost-effective
- No metal/moveable parts
- No recalibration costs
- Hypoallergenic
- NAL tested according to AS/NZ 1270:2002
- Annual monitoring suggested
